■ Executive Summary

This report presents a comprehensive financial and operational analysis of Brazil's largest e-commerce platform, Olist, based on 100K+ order records. The objective was to uncover revenue trends, top-performing product categories, customer payment preferences, and geographic distribution — providing data-driven insights for business growth decisions.

Metric	Value	Insight
Total Revenue	\$16.01M	Across all product categories
Total Orders	99,441	Full order history analyzed
Avg Order Value	\$160.96	Revenue per order
Top Category	Health & Beauty	Highest revenue category
Top Payment	Credit Card (78%)	Most preferred method
Top State	São Paulo (SP)	Highest revenue state
Total Categories	71	Diverse product range

■ Key Findings Summary

- ■ \$16.01M total revenue generated across 99,441 orders on the Olist platform
- ■ Health & Beauty is the #1 revenue-generating category at \$756K
- ■ Credit card dominates payment methods with 78% usage share
- ■ São Paulo state contributes the highest revenue among all Brazilian states
- ■ 32,951 unique products across 71 categories sold on the platform
- ■ Average review score of 4.14 — strong customer satisfaction overall
- ■ Average product weight of 2.28 KG across all categories

■ Interactive Dashboard

The following dashboard was built in Power BI and provides an interactive 2-page view of all revenue and product metrics. It includes charts covering monthly trends, top states, payment types, product categories, and revenue contribution analysis.

■ Revenue & Geographic Analysis

■ Revenue by State (Top 10)

São Paulo (SP) dominates revenue contribution, followed by Rio de Janeiro (RJ) and Minas Gerais (MG). The southeast region collectively accounts for the majority of Olist's total revenue, reflecting Brazil's concentration of economic activity.

Rank	State	Code	Revenue Tier	Risk Level
1	São Paulo	SP	Highest	CRITICAL
2	Rio de Janeiro	RJ	High	HIGH
3	Minas Gerais	MG	High	HIGH
4	Santa Catarina	SC	Medium	MEDIUM
5	Paraná	PR	Medium	MEDIUM
6-10	Other States	—	Low	LOW

■ Monthly Revenue Trend

Revenue shows relatively consistent monthly distribution throughout the year. The trend line reveals stable order volumes with slight peaks during mid-year months, suggesting steady demand without extreme seasonal spikes.

■ Revenue by Payment Type

Payment Method	Revenue Share	Customer Preference
■ Credit Card	~78%	Dominant — most preferred
■ Boleto	~19%	Common in Brazil (bank slip)
■ Voucher	~2%	Promotional / discount use
■ Debit Card	~1%	Least used method

■ Product & Category Analysis

Olist hosts 32,951 unique products across 71 categories. The top categories account for a disproportionate share of total revenue, with Health & Beauty leading the platform.

■ Top 10 Categories by Revenue

Rank	Category	Revenue	Tier
1	■ Health & Beauty	\$756K	CRITICAL
2	■ Watches & Gifts	\$688K	HIGH
3	■ Bed Bath & Table	\$532K	HIGH
4	■ Sports & Leisure	\$517K	HIGH
5	■ Computers & Acc.	\$496K	MEDIUM
6	■ Housewares	\$392K	MEDIUM
7	■■ Furniture & Décor	\$382K	MEDIUM
8	■ Auto	\$343K	LOW
9	■ Baby	\$251K	LOW
10	■ Cool Stuff	\$228K	LOW

■ Product KPIs

Metric	Value	Context
Total Products	32,951K	Unique products on platform
Total Categories	71	Diverse product catalog
Avg Weight	2.28 KG	Average product weight
Avg Review Score	4.14 / 5	Strong customer satisfaction

■ Business Recommendations

Based on the data analysis, the following actionable recommendations are proposed to drive revenue growth and operational efficiency for Olist:

1. ■ Double Down on Health & Beauty

Health & Beauty generates \$756K — the highest of any category. Olist should invest in targeted marketing campaigns and exclusive seller partnerships in this category to further increase its revenue contribution.

2. ■ Optimize Credit Card Experience

78% of revenue comes from credit card payments. Implementing EMI options, cashback offers, and co-branded card promotions can increase average order values and customer loyalty.

3. ■ Expand Beyond São Paulo

SP dominates revenue, but states like SC, PR, and BA show growth potential. Targeted regional campaigns and faster delivery options in these states can unlock new revenue streams.

4. ■ Leverage High Review Scores

The 4.14 average review score is a competitive asset. Highlighting verified customer reviews in product pages and seller profiles can boost conversion rates.

5. ■ Expand Mid-Tier Categories

Categories ranked 6-10 (Housewares, Furniture, Auto) show solid revenue. Curated seller onboarding in these segments can help diversify revenue beyond the top 5 categories.

6. ■ Increase Boleto Conversion

Boleto users represent a significant segment (~19%). Simplifying the checkout flow for Boleto payments and offering loyalty incentives can retain price-sensitive customers.

■ Conclusion

This analysis of Olist's e-commerce dataset reveals a thriving marketplace with \$16.01M in total revenue across 99,441 orders. Health & Beauty, Watches & Gifts, and Bed Bath & Table are the top revenue-generating categories, while Credit Card payments dominate customer preferences at 78%.

São Paulo's revenue dominance highlights regional concentration risk — expanding seller networks and marketing efforts to other Brazilian states represents a significant growth opportunity. The high average review score of 4.14 reflects strong customer satisfaction, providing a solid foundation for scaling the business.

The interactive Power BI dashboard equips business teams with a real-time view of revenue trends and product performance, enabling data-driven decisions across sales, marketing, and operations.
